Can you share a deck of slides and a set of codes?

Transparency in data analysis is the singular key component of our Centre at ASOC. In other words, we opened every single code and documentation to the public. You can find a required program, i.e., Docker, in the *Prerequisites* Section, a full dataset in the *Materials* Section, a set of codes in the *Objectives* Section, and a deck of slides in the *Materials* Section. We do not have anything beyond these files, however, an Instructor can deliver some **pro tips** during the Workshop. Thank you very much for your interest and support.
